HAZARDCO COVID-19 PROTECTION FRAMEWORK RESOURCES

Traffic Light System for the construction industry

Here is a breakdown of the traffic light system. We have identified what the base controls that you need to put in place on site at Green, then the added controls as we move up to orange or red. You can view this resource here.

Vaccination Risk Assessment

- Role-Based Risk Assessment for each role to determine if your workers are required to be vaccinated.
- Business Risk Assessment is a useful tool to determine if the work you undertake or clients you work with require all workers to be vaccinated.
- Worksite Risk Assessment can be used to determine if your specific worksite / client requires vaccinated workers only. This can be useful for situations where your workers/contractors do not normally require vaccination but only on a site-specific basis.

COVID-19 Site Safety Plan

We have developed a COVID-19 Site Safety Plan for each traffic light level. This should be completed for any existing projects you have on the go as or for your business.

- Red
- Orange
- Green

Suspected COVID-19 Response Guide

Follow this guide when you have a suspected COVID-19 case on site

Cleaning and Hygiene Guide

CHASNZ guide with cleaning and hygiene tips to follow on-site to reduce the risk of spreading COVID-19

CHASNZ COVID-19 Protocols

These protocols are to help as we move between settings and are expected to develop and evolve as requirements change. View these here.
